
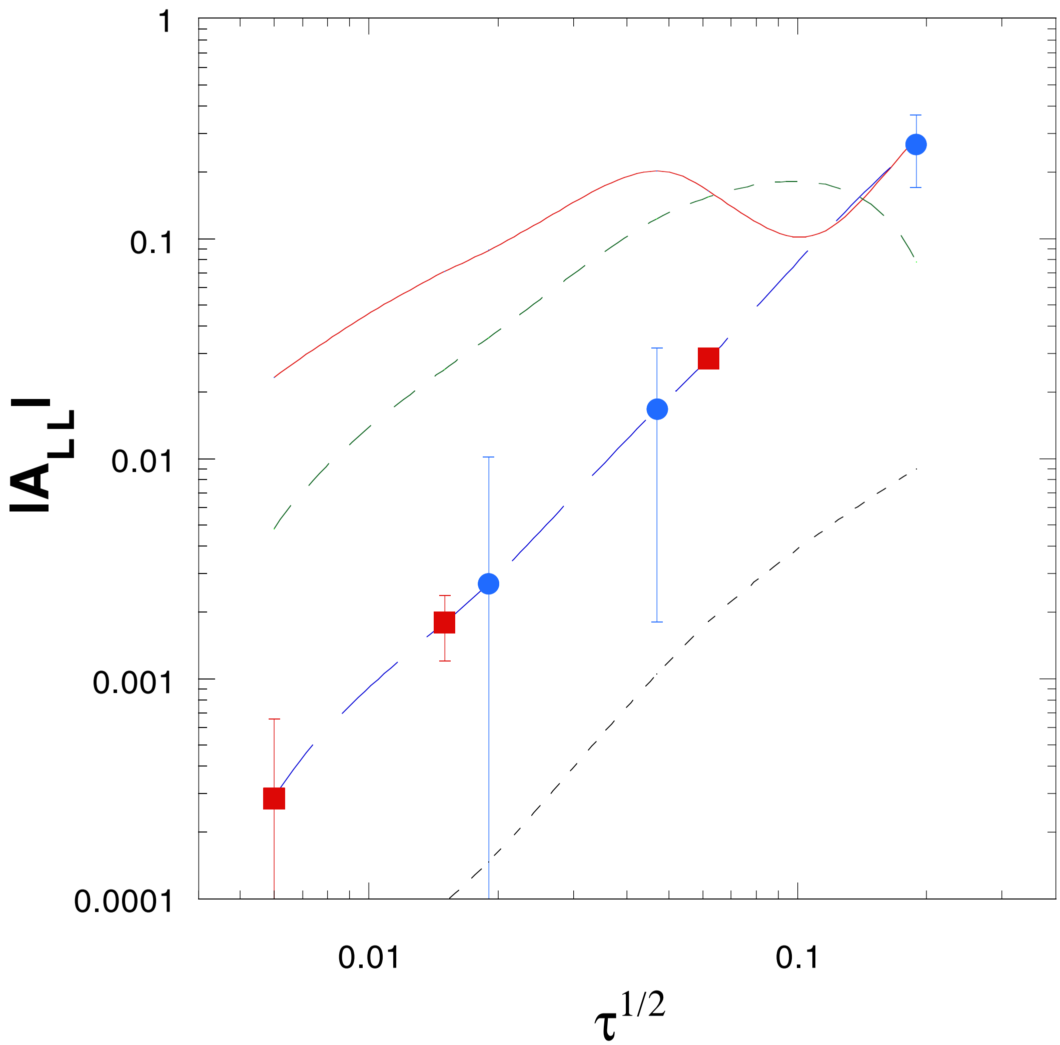

Figure 11. Asymmetries from the polarized gluon structure functions of Ref. [31] solid, Ref. [33], medium dash, Ref. [32] long dash, and Ref. [31] short dash. A parton-level asymmetry, $|\hat{a}_{LL}| = 0.3$ was assumed. The points show error estimates for J/ψ and Υ (circles) production at $\sqrt{s}$ = 50, 200, and 500 GeV (right to left on the graph).
