

Accelerator Applications Research Division  
Nuclear Transmutation Technology Group  
High-Gradient Cavity R&D Team

**1. Abstract**

Superconducting linacs are suitable for high-power beam facilities, such as spallation neutron sources. The mission of this team is to develop a highly efficient superconducting linac with a high acceleration voltage, capable of handling high beam intensity and ensuring high availability, drawing from the operational experiences of SRILAC.

**2. Major Research Subjects**

- (1) Development of high-gradient cavities for low beta ions
- (2) Development of power saving cryomodules
- (3) Operation with high availability

**3. Summary of Research Activity**

Development of highly efficient superconducting accelerator modules

**Members****Team Leader**

Naruhiko SAKAMOTO

**Research/Technical Scientists**

Yutaka WATANABE

Kazutaka OZEKI

**Research & Development Scientist**

Kenji SUDA
