

Announcement for Detector-Development Beam Time

Tohru Motobayashi The Chair of the MT Committee : RIKEN Nishina Center for Accelerator-Based Science

IMPORTANT NOTE: This is NOT a Call For Proposal of Experiments at RIBF.

This is an announcement for short-term beam-time request dedicated for the detector development. In order to meet the requests from users and to enhance user's activities, Nishina Center provides this type of beam time. Upon user's requests, we will manage this beam time as much as it is allowed.

Since these beam time requests do not go through the PAC discussion, there are several restrictions and limitations as follows:

- 1. Priority **NOT** claimable for the beam time scheduling.
- 2. Beam time is limited to be not more than two days.
- 3. Only proposals with stand-alone operation of AVF are currently acceptable.
- 4. After the experiment, a report on the results should be submitted in 10 days to the User Support Office (<u>UserSupportOffice@ribf.riken.jp</u>).

Those requesting a beam time under these restrictions/limitations must submit the Accelerator Use Planning Sheet, with short summary (max. 2 pages) of the proposed study to the User Support Office. The Accelerator Use Planning Sheet can be downloaded from our web site;

http://www.nishina.riken.jp/UsersGuide/Nuclear/proporsal/index.html#Process

The MT committee will review the submitted proposals and make recommendations to the directors of Nishina Center and CNS. The safety aspects of the approved proposals will be checked by the in-house Safely Review Committee.

With this announcement, a beam-time request for the coming January, February and March is called for. There will be a couple of days available in this period for the requests.

Deadline of the proposal submission is **the end of work hours of Dec. 14 (Fri.)**. Contact us for further details.
